

Building management made easy:

Daikin launches new touch screen centralised control solution for retailers

Daikin's new user-friendly centralised control solution with cloud connection simplifies building systems monitoring and control and saves on energy costs.

Daikin has introduced a comprehensive centralised control solution for retailers and small commercial businesses which delivers substantial savings in energy costs with improved user convenience. The new intelligent Tablet Controller provides single point access through an easy to use touchscreen tablet in-store or on-line through the Daikin Cloud service. This allows businesses to manage their local comfort needs cost-effectively, whilst controlling energy costs through remote monitoring. The new advanced controller integrates the management of all essential building systems including cooling, heating and ventilation plus fire or security systems, in individual premises and multiple sites.

Cost-effective comfort

Offering a discreet solution that blends in with its environment, the intelligent Tablet Controller is easy to use with its intuitive touch screen operation. Built-in system controls ensure optimum comfort and energy efficiency.

The advanced control system has been developed with the complex needs of the banking, retail and hospitality sectors in mind. Centralised control enables the system to be fine-tuned to meet the heating and cooling needs of different areas to be accommodated, from retail floors, where customer comfort is a prime consideration, to kitchens and storage rooms, where a wider temperature band is acceptable.

The intelligent Tablet Controller's scheduling capabilities allow system settings to be adjusted to accommodate variable occupancy patterns during opening hours and pre-and post-trade. Maintaining comfort levels by operating ventilation heating and cooling as needed helps reduce running costs significantly. By adapting to changing seasons, the system also guarantees year-round climate control and optimal energy usage.

Simplified control from anywhere

The intelligent Tablet Controller provides easy monitoring and control, either in-store via the touchscreen or remotely through The Daikin Cloud Service. On-line access allows system settings to be adjusted from wherever you are and enables installers or technical staff to login remotely to provide assistance without the need to come on site, saving valuable time and money.

The Daikin Cloud Service incorporates multi-site tracking and benchmarking features which allow building managers and owners to compare building performance to identify areas of energy waste and optimise operations in premises with a heavy energy usage (energy usage is shown in energy cost per square metre).

Launch Offer: To celebrate the release of the new Intelligent Tablet Controller, Daikin is offering a free one year subscription to the Daikin Cloud Service when an account is set up*

A tradition of innovation

Daikin's new Intelligent Tablet Controller is the latest in a series of innovations developed to meet the comfort and operational needs of retail and light commercial businesses.

Developed at Daikin's dedicated European Design Centre, the latest range of products is designed to provide discreet, unobtrusive solutions that ensure compliance with legislative and environmental requirements while helping to control energy consumption and offset rising energy costs.
